01 – EXECUTIVE SUMMARY

Executive Summary

This proposal outlines a revised performance-based partnership between The Experts Hub Africa (TEHA) and the technical partner responsible for building, maintaining, and strengthening the organisation's digital platform.

The platform was initially developed without a conventional upfront development fee. TEHA and the technical partner agreed instead on a **GH¢500 commission per successfully processed client** generated through the platform.

Since then, the solution has evolved into a multi-module business platform — supporting work applications, travel and study lead generation, staff administration, analytics, secure document handling, and automated communications.

Proposed arrangement: GH¢1,000 per successfully processed client — a performance-based model aligned with business outcomes, covering the total digital infrastructure delivered, ongoing technical support, and a structured continuity plan.

02 – BACKGROUND

Background of the Existing Partnership

The original arrangement was founded on shared growth and mutual trust:

- Full platform development responsibility was accepted without an upfront project fee.
- TEHA's costs were tied to real business results rather than hourly billing.
- Significant investment was made in architecture, workflows, security, and admin tools.

That model was appropriate at the early stage. The platform scope, operational dependency, and long-term technical responsibility have since expanded materially.

03 – EVOLUTION

Evolution of the Platform

Stage	What existed
Initial intent	A public website presenting TEHA's services
Current reality	A business platform with application workflows, admin operations, analytics, CMS, secure uploads, email automation, and role-based staff access

TEHA now operates on digital infrastructure that supports marketing, client intake, application processing, and internal visibility — not merely an online brochure.

04 — PLATFORM CAPABILITIES

Platform Capabilities Delivered to Date

The following reflects functionality that exists in the platform today, grouped for management clarity. Items marked *partial* are operational but not yet full product pipelines.

A. Public Website & Brand Presence

- Homepage with Work, Travel, and Study pathways
- Services, About, Contact, Blog, FAQ, and Legal pages
- Mobile-responsive TEHA-branded experience
- WhatsApp enquiry integration and SEO foundations

B. Work Abroad Module (core — fully built)

- Searchable job listings with advanced filters
- Detailed job pages with requirements, benefits, and FAQs
- Multi-step guided application workflow with draft saving
- Reference numbers, confirmation page, printable profile, PDF export
- Secure document upload, validation, and private storage
- Duplicate-application detection and submission controls

C. Study Abroad Module (partial — lead generation)

- Destination catalogue and detail pages with branded presentation
- Enquiry routing to contact channels
- *Not yet built*: programme catalogues, tuition, intakes, study applications

D. Travel Packages Module (partial — lead generation)

- Package catalogue and themed detail pages
- Enquiry routing to contact channels
- *Not yet built*: pricing, booking, payments, travel applications

E. Contact & Communications

- Server-side contact form with email delivery
- Admin-configurable contact details and social links
- Automated applicant and admin emails on submission and status changes
- Customisable email templates in admin

F. Admin Console (operations centre — fully built)

APPLICATIONS

- Search, filter, and review applications
- Status workflow and internal notes
- Secure document preview and download

CONTENT CMS

- Jobs, travel, study listings
- Blog, FAQs, testimonials
- Legal pages and site settings

ANALYTICS

- Application funnel and conversion
- Job performance metrics
- CSV exports for reporting

SECURITY

- Role-based staff access (5 roles)
- Audit log for sensitive actions
- Rate limiting and spam protection

G. Technical Infrastructure

- PostgreSQL database with structured data models
- Production deployment on Vercel with cloud storage support
- Environment-based configuration for email, storage, and security
- Validation, error handling, and automated tests on critical flows

H. Items Not Yet Complete

Item	Status
Staff user management in admin UI	Roles exist; onboarding via database/seed
Study / travel full applications	Enquiry-only at present
Applicant login portal	Cookie/token access only
Agent & Ambassador referral system	Separate specification document

05 – BUSINESS VALUE

Business Value Delivered

Area	Operational benefit
Client acquisition	Professional public presence with clear pathways across all service lines
Application quality	Structured profiles instead of incomplete email/WhatsApp submissions
Staff efficiency	Centralised dashboard replacing scattered files and manual tracking
Risk reduction	Documents collected securely; sensitive access is logged
Scalability	New jobs, packages, and destinations without rebuilding the site
Visibility	Analytics on conversion, drop-off, and job performance

06 – ONGOING SUPPORT

Ongoing Technical Support & Maintenance

As technical partner, ongoing support includes:

- Platform monitoring, stability, and bug fixes
- Support for admin and applicant technical issues
- Maintenance of existing functionality
- Reasonable optimisations and minor improvements
- Technical guidance on roadmap and infrastructure decisions
- Deployment and environment support (hosting, email, storage)

07 – SCOPE BOUNDARIES

Scope Boundaries

INCLUDED

- Stability and bug fixes
- Minor UX improvements
- Security and dependency maintenance
- Agreed response-window support

SEPARATE AGREEMENT

- Major new modules (payments, portals, etc.)
- Large redesigns or new product lines
- New third-party integrations
- Unlimited feature development

Principle: ongoing support keeps the platform healthy; substantial new development is scoped and agreed separately.

08 – CONTINUITY PLAN

Technical Continuity & Exit Plan

TEHA should never be operationally stranded if the technical partner steps back. A structured transition framework is proposed:

Phase	Proposed approach
During partnership	Documented, deployable codebase; TEHA-owned hosting and database where possible
Notice period	60–90 days written notice before disengagement
Handover	Architecture guide, deployment checklist, admin guide, knowledge transfer sessions
Replacement support	Help define role requirements and orient incoming developer (capped hours)
Post-exit	Limited critical-issue support only (e.g. 30 days, capped — not indefinite)

09 – COMMERCIAL ARRANGEMENT

Proposed Revised Commercial Arrangement

	Current	Proposed
Model	Performance-based commission	Performance-based commission
Rate	GH¢500 per successfully processed client	GH¢1,000 per successfully processed client
Upfront fee	None	None
Payment trigger	Successful client processing	Successful client processing

The proposed rate covers:

1. Total platform infrastructure delivered to date
2. Ongoing technical support and maintenance
3. Structured continuity and handover planning
4. Continued platform strengthening (referral system scoped separately)

10 – JUSTIFICATION

Strategic Justification

The increase reflects a shift from website builder to **long-term technical partner** responsible for a business-critical platform. TEHA still pays only on success — while avoiding the cost of a full-time developer, agency fees, and unstructured manual operations.

Central message: GH¢1,000 is not compensation for a single feature. It is a revised performance partnership covering total digital infrastructure, ongoing support, and responsible continuity planning.

11 — NEXT STEPS

Mutual Value & Proposed Next Steps

FOR TEHA

- Outcome-aligned costs
- Professional digital operations
- Reduced manual processes
- Clear continuity if leadership changes

FOR TECHNICAL PARTNER

- Fair compensation aligned with value
- Sustainable support model
- Recognition of technical investment
- True partnership, not unpaid scope creep

Recommended next steps:

1. Review and approve this proposal in principle
2. Agree contractual definitions below
3. Sign a Partnership & Commission Agreement
4. Proceed with referral system per separate specification
5. Schedule quarterly partnership review

12 — DEFINITIONS

Recommended Contractual Definitions

Successfully processed client

Define a clear business milestone — e.g. placement confirmed, service fee received, or agreed advisory milestone completed — with no refund/cancellation within an agreed window (14–30 days).

Commission payable

Payable within an agreed period after TEHA confirms successful processing. Monthly reconciliation with 14-day dispute window.

Client scope

Clarify whether commission applies to all platform-originated clients or only referred clients. Recommend documenting the chosen model explicitly.

Exit & handover

60–90 days notice; capped handover hours (e.g. 40 hours transfer + 10 hours post-exit critical support within 30 days).

This document is confidential and intended solely for The Experts Hub Africa management. Platform capabilities described reflect the system as implemented at the time of drafting.
